

## SET 1

### Each question carries 1 mark

- The \_\_\_\_\_ function can be used to create vectors of objects by concatenating things together.  
a. c()      b. cp()      c. concat()      d. con()
- \_\_\_\_\_ function returns a vector of the same size as x with the elements arranged in increasing order.  
a. sort()      b. orderasc()      c. orderby()      d. sequence()
- What will be the output of the following R code?  

```
> x <- 6  
> class(x)
```

  
a. "integer"      b. "numeric"      c. "real"      d. "imaginary"
- What is the command to install a package in R?  
a. install.package()      b. package.install()      c. install      d. package.installer()
- How many basic data types are there in R?  
a. 3      b. 4      c. 5      d. 6
- Which of the following is true about MapReduce?  
a. It provides resource management      b. An open source data warehouse system for querying and analyzing large datasets stored in hadoop files  
c. Data processing layer of hadoop      d. Data storage layer of hadoop
- What is the minimum amount of data that a disk can read or write in HDFS?  
a. Byte size      b. Block size      c. Heap      d. None of the above
- Big data analysis does the following except?  
a. Spreads data      b. Analyze data      c. Organize data      d. Collect data
- Identify the node which acts as a checkpoint in HDFS?  
a. Secondary name node      b. Secondary data node      c. Name node      d. Data node
- Which among the following is the programming model designed for processing large volumes of data in parallel by dividing the work into a set of independent tasks?  
a. MapReduce      b. HDFS      c. HIVE      d. Pig

### Each question carries 1 mark

- The \_\_\_\_\_ function can be used to create vectors of objects by concatenating things together.  
a. c()      b. cp()      c. concat()      d. con()
- What is the command to install a package in R?  
a. install.package()      b. package.install()      c. install      d. package.installer()
- To create a data frame in R, which function should you use?  
a. data.frame()      b. Create.data.frame()      c. new.data\_frame()      d. df()
- \_\_\_\_\_ function returns a vector of the same size as x with the elements arranged in increasing order.  
a. sort()      b. orderasc()      c. orderby()      d. sequence()
- How many basic data types are there in R?  
a. 3      b. 4      c. 5      d. 6
- Which statement is used in R to skip the current iteration of a loop and begin the next one?  
a. Continue      b. Next      c. ship      d. break
- Which of the following maps input key/value pairs to a set of intermediate key/value pairs?  
a. Mapper      b. Reducer      c. Both Mapper and Reducer      d. None of the above
- Big data analysis does the following except:  
a. Spreads data      b. Analyze data      c. Organize data      d. Collect data
- Identify the node which acts as a checkpoint in HDFS?  
a. Secondary name node      b. Secondary data node      c. Name node      d. Data node
- What is the minimum amount of data that a disk can read or write in HDFS?  
a. Byte size      b. Block size      c. Heap      d. None of the above

### SET 3

#### Each question carries 1 mark

1. The \_\_\_\_\_ function can be used to create vectors of objects by concatenating things together.  
a. c()      b. cp()      c. concat()      d. con()
2. To create a data frame in R, which function should you use?  
a. data.frame()    b. Create.data.frame()    c. new.data\_frame()    d. df()
3. \_\_\_\_\_ function returns a vector of the same size as x with the elements arranged in increasing order.  
a. sort()      b. orderasc()      c. orderby()      d. sequence()
4. Which statement is used in R to skip the current iteration of a loop and begin the next one?  
a. Continue      b. Next      c. ship      d. break
5. What is the command to install a package in R?  
a. install.packages()    b. packages.install()    c. install    d. package.installer()
6. \_\_\_\_\_ stores its metadata on multiple disks that typically include a non-local file server.  
a. Action node    b. Data node    c. Name node    d. None of the mentioned
7. Which of the following maps input key/value pairs to a set of intermediate key/value pairs?  
a. Mapper    b. Reducer    c. Both Mapper and Reducer    d. None of the mentioned
8. Identify the node which acts as a checkpoint in HDFS?  
a. Secondary name node    b. Secondary data node    c. Name node    d. Data node
9. Which among the following is the programming model designed for processing large volumes of data in parallel by dividing the work into a set of independent tasks?  
a. MapReduce    b. HDFS      c. HIVE    d. Pig
10. What is the minimum amount of data that a disk can read or write in HDFS?  
a. Byte size    b. Block size      c. Heap    d. None of the above

1. To create a data frame in R, which function should you use?  
a. data.frame()    b. Create.data.frame()    c. new.data\_frame()    d. df()
2. Which statement is used in R to skip the current iteration of a loop and begin the next one?  
a. Continue      b. Next      c. ship      d. Break
3. Which IDE is most commonly used with R for data analysis?  
a. Jupyter notebook    b. RStudio      c. Visual Studio code    d. Atom
4. \_\_\_\_\_ function returns a vector of the same size as x with the elements arranged in increasing order.  
a. sort()      b. orderasc()      c. orderby()      d. sequence()
5. What is the command to install a package in R?  
a. install.package()    b. package.install()    c. install    d. package.installer()
6. Which among the following is the programming model designed for processing large volumes of data in parallel by dividing the work into a set of independent tasks?  
a. MapReduce    b. HDFS      c. HIVE    d. Pig
7. Which of the following is true about MapReduce?  
a. It provides resource management      b. An open source data warehouse system for querying and analyzing large datasets stored in hadoop files  
c. Data processing layer of hadoop      d. Data storage layer of hadoop
8. What is the minimum amount of data that a disk can read or write in HDFS?  
a. Byte size    b. Block size      c. Heap    d. None of the above
9. Identify the node which acts as a checkpoint in HDFS?  
a. Secondary name node    b. Secondary data node    c. Name node    d. Data node
10. The HDFS client software implements \_\_\_\_\_ checking on the contents of HDFS files.  
a. Metastore    b. Parity    c. Checksum    d. None of the mentioned
