

What is data? Explain about nature of data.
Give examples of different Big Data platforms.
Describe Hadoop ecosystem.
Identify the core components of HDFS.
Explain the Map reduce execution pipeline.
Why do we need Hadoop for Big Data Analytics?
Give examples of Hadoop file systems.
Define the term “Big data”. Which are the different 5 V’s that help to decide whether a given data source contributes to big data.
How map-reduce performs parallel processing.
Differentiate Hadoop with RDBMS
List out the key benefits of Hadoop.
Discuss the file read and write operations in HDFS.
Explain in detail about data analytic processes and tools.
How to access HDFS over HTTP.
Explain map reduce programming model.
Which are the core components of Hadoop? Explain in detail.
Give examples of Hadoop file systems.
Explain different filesystem operations in hadoop.
Describe the various big data analytical methods in detail.
Explain Intelligent Data Analysis in detail.
How wordcount problem can be implemented using MapReduce model?
Write about the anatomy of file read and write operation in HDFS.
