

Explain about the partitioned and managed tables in Hive.
Identify the ways in which a pig program can be executed.
Explain the main components of Hadoop Pig framework.
Write the syntax to create a table and partition in Hive.
Describe about Data Types and File Formats in Hive.
Write about Pig Latin Structure and functions
What are the different execution modes of Pig? (3)
Differentiate Hive from traditional databases. (3)
Explain the main components of the Hadoop Pig framework (7)
Write about different data processing operators in Pig Latin. (7)
What are the different types of Tables in Hive? Explain. (5)
Explain the data model and Read -Write operations in HBase?
State the differences between Pig and SQL. (3)
What is Hbase? What are its features? (3)
Explain Pig architecture in detail. What are its components? (7)
Illustrate features and Architecture of Hive with neat diagram. (7)
Write the syntax to create a table and partition in Hive. (7)
What are the different data types used in Pig Latin and describe its various operators.

Discuss the general list operations in R with example.
Explain in detail about the Matrix handling in R.
List and explain four R functions used in descriptive statistics
Discuss the data visualization for multiple variables in R
Describe the R functions used for cleaning dirty data
What are the important features of R programming?
Write an R program to find the factorial of a number by reading the input from keyboard.
Discuss how reading and writing files is handled in R. (4)

Write a program in R to read a dataset 'internals.csv' which consists of id, name and marks of 5 subjects each out of 50. Write code
i). To Read data frame and display columns
ii). To add an extra column Total
iii). To display class topper
iv). To display student details having total marks above the average
v). To prepare rank list by sorting rows based on total marks

Explain Matrix creation and Matrix handling in R. Discuss about applying functions to Matrix rows and columns.

Illustrate the operations performed in R vectors.
Illustrate any three R functions used in data analytics. (3)
Write an R program to print Fibonacci series.
Describe about vectors in R. What are the operations that can be performed on vectors?
Explain the different categories of attributes and data types in R. (7)
What are lists in R? How lists are handled? (7)
Describe data frames in R. How it can be created and explain the various operations on frames.
